

DirectMessage API VB Sample

API V3: <https://directapi.max.md:8445/message/>

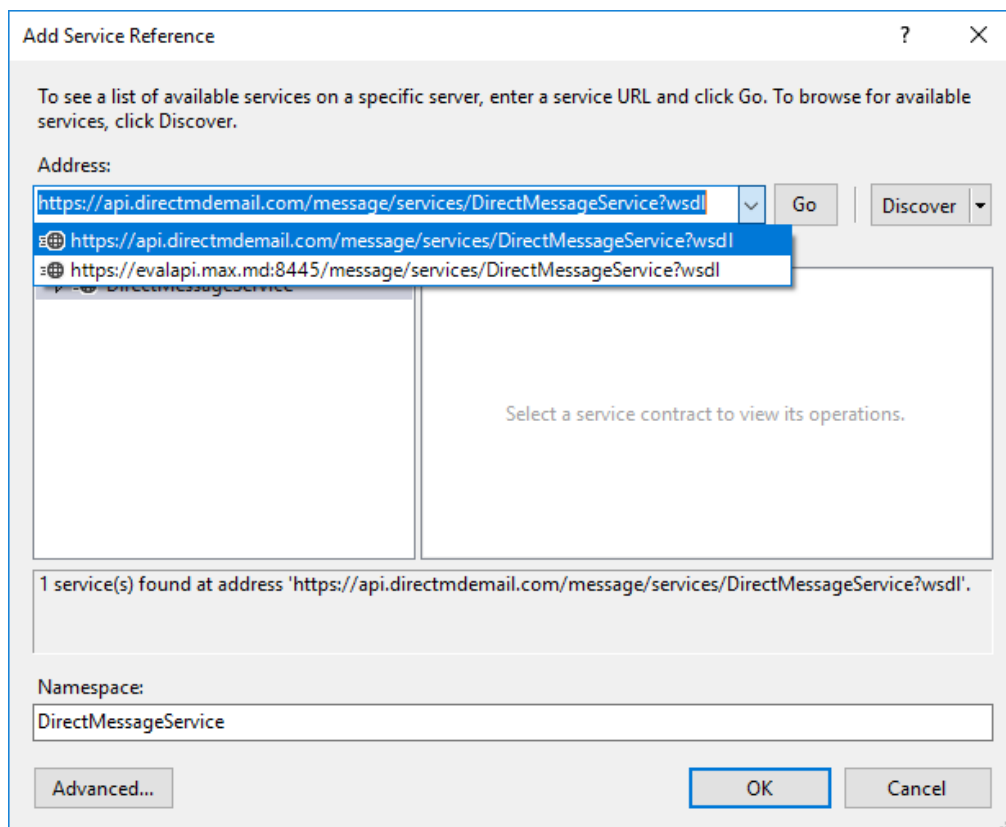

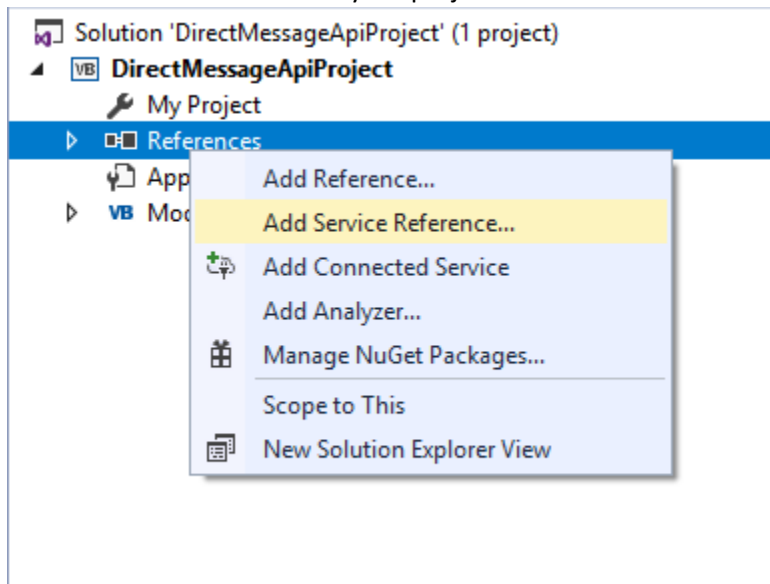

Production Endpoint URL: <https://rs4b.max.md:8445/message/services/DirectMessageService>

Evaluation Endpoint URL: <https://rs5c.max.md:8445/message/services/DirectMessageService>

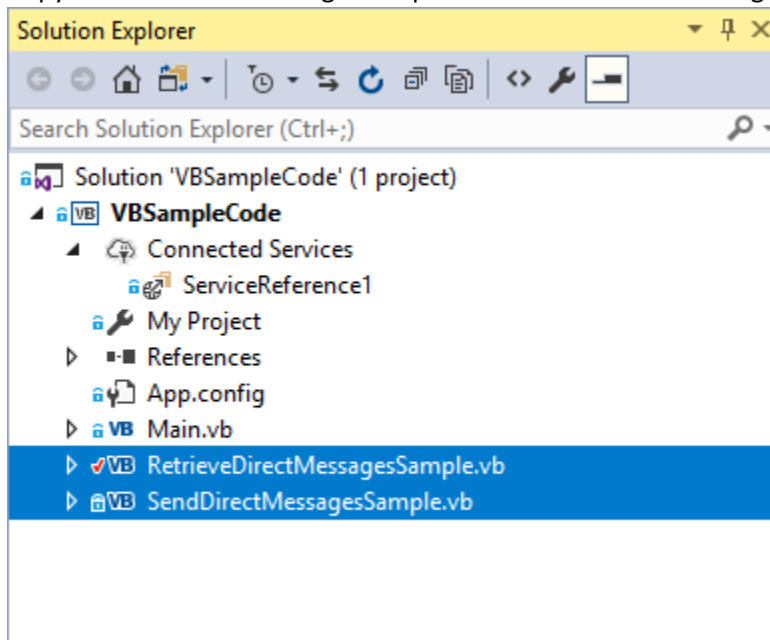

1. Create a new .NET Framework project

2. Add our service reference in your project

3. Copy RetrieveDirectMessagesSample.vb and SendDirectMessagesSample.vb to your project

See Main.vb how to use these two classes, and that's it!

To run the sample project, you need to uncomment functions you want to use on Main.vb and set correct username and password.
